

Staff Influenza Immunization Rates

95%

Staff influenza immunization is one way we keep patients safe at Mercy Medical Center. The organization does not mandate immunization for our workers, but it is an expectation that staff get immunized if medically able to do so. A declination form is needed annually for

those staff who are unimmunized. During peak flu season, if we are not at least 95% immunized, a mask mandate goes into effect for all unimmunized staff in a preventative effort to decrease the spread of influenza.
